GEMUETLICHKEIT

The living room is a symbol of shared place, accompanied by the dreams to create a place of timeless beauty and relaxation."

Fire symbolizes the beginning of culture. Its sight is pure magic – watching flames dancing in a moment of casualness, comfort and warmth.

These days, fire in our living space expresses the highest of all feelings - Gemuetlichkeit like the Germans say. A contemporary fireplace in the living room achieves this feeling of total coziness and well-being.

Purist and timeless designs of our fireplaces not only set impressive statements in your home, but create a completely new, mesmerizing atmosphere.

OUR VALUES

Quality

From the start in 1986, our philosophy has always been developing fireplaces that feature designs and techniques never seen before. Spartherm units are designed and manufactured to the highest standards possible, using only the best materials - the result are products striving for perfection in terms of contemporary design and longevity.

Safety

Besides being a pioneer in innovation and functionality, our main concern is your safety. Therefore we meticulously take care about the security of all our products, no matter if it's a wood, gas or an ethanol appliance. Countless hours of testing, special safety features and reliable components ensure that our products meet the highest standards possible.

Customers

The fact that in only 35 years our company grew to one of the leading players in the fireplace industry with over 1000 employees didn't change our values at all – building close, sustainable relationships with all our customers worldwide. And since we are a family-based business, we know our roots and hold on to these values, because they made us what we are today.

Service

We pride ourselves on the best service to back up our world class products. Reliable after-sales service and the availability of spares and advice are an important part of the customer satisfaction.

HEAT MANUFACTURE

The Spartherm Brand stands for innovation and design. The philosophy of quality and design are ingrained in our development, production and service to our customers.

Spartherm is one of the largest producers of fireplaces, inserts and stoves in Europe. With two factories with a total of 35,000 m² of production space we plan, develop and manufacture more than 60,000 units per year from one single source.

The basis of our success? The high technical quality of the stoves combined with stylish design and consistent innovations in the sector of combustion technology. That is the status quo and it will stay that way. A promise you can rely on.
